SCALE 1:6

The card style solution is a way for a servo to be mounted to any x-style foldable wheelchair. There would be two of the pieces to the left that screw into each other to wrap around the intersection of the axles, and securely rest in the crook of the 'V'.

The card style solution (and its accessories) are primarily made with 3D printed PLA, but have the option to be reinforced with wood or sheet metal with the use of CNC/waterjet cutting. Regarding stability and grip to the axles, a rubber coating would go a long way. Lastly a future model would have the motor at an angle to lessen the torque acted on it.

UNLESS OTHERWISE SPECIFIED, DIMENSIONS ARE IN INCHES .XX = ±.0- .XXX = ±.00- .XXXX = ±.000- ANGULAR = ± ° FRACTIONAL = ± SURFACE FINISH 		NAME		DATE		TITLE Card Style Solution: Card Style Mount Mockup 1
